

OCOSS 2010

Ocean & Coastal Observation :

Sensors and observing systems, numerical models & information Systems

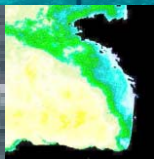

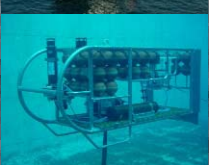

European Conference

21 - 23 June 2010

Organized in the frame of the Sea Tech Week 21 - 25 June

Congress Center Le Quartz, Brest, France

The OCOSS objectives are to bring together R&D teams and researchers in the domain of ocean and coastal observations, recent breakthrough and future developments. Devoted to technical innovations in the field of coastal observations and forecasting, sensors, measurement systems and modeling, the conference will focus on the following topics:

- 1 - Sensors for Environmental Ecosystem Assessment: Multiscales & Multi-physics Models
- 2 - Operating Environment Assessment for EM, EO/IR & Acoustic Sensors
- 3 - Remote Sensing Technics, Processing and Data management
- 4 - METOC (Meteorology Oceanography) Systems
- 5 - Underwater, Onshore/Offshore & Airborne Observation Platforms
- 6 - Safety & Security Surveillance Systems for Sea and Harbors
- 7 - Awareness system and risk management
- 8 - Practical Access to the Frequency Spectrum

15th of March 2010 : Abstract submission Deadline
15th of April 2010 : Notification of acceptance
15th of May 2010 : Final paper submission Deadline
