Distance Geometry and Applications

Antonio Mucherino and Douglas S. Gonçalves

GSI17, Paris
November 8th 2017
Distance Geometry and Applications

1. An Approach to Dynamical Distance Geometry
2. Distance Geometry in Linearizable Norms
4. Information Distances in Stochastic Resolution Analysis
5. $k$-Means Clustering with Hölder Divergences
6. Real Hypersurfaces in the Complex Quadric with Certain Condition of Normal Jacobi Operator

Two hours $\rightarrow$ 20 minutes each, including questions!

special issue of Optimization Letters

Distance Geometry and Applications
in memory of Michel Deza

Author of the Encyclopedia of Distances, and ipso facto an eminent member of the DG community, Michel Deza suddenly passed away a few days before our workshop was held. We found important to dedicate this special issue of Optimization Letters, that was already planned before his death, to his memory.

Guest Editors: Antonio Mucherino and Carlile Lavor
Submission deadline: December 31\textsuperscript{th}, 2017.
